

## Example of a Successful Application Enhanced Floor Repair & Coating

UK distributor supplies THISTLEBOND TPC 620 - Floor Protection System - Two Component High Build Superior Polymer!

The application was for a warehouse unit that was being changed into a manufacturing unit. The requirement was for a Polymer Flooring System that would be Hard Wearing and Resistant to Fork Lift Truck and High Traffic.

The pictures below show the colourful coating (other colours available) with one piece of new machinery present.

Surface preparation is the key to a long life coating and this was obtained by blast cleaning the old concrete - washing down - and drying over a period of 24 hours.

The THISTLEBOND TPC 620 was then mixed and applied by ROLLER to the prepared surface. In this case a SECOND coat was used due to the HIGH TRAFFIC expectations on the floor surface.

A period of 24 hours was allowed between coats.

NOW is the time when MOST companies will be PLANNING to carry out NEW and REPLACEMENT coating for their BUILDINGS and STRUCTURES.

THISTLEBOND offer a complete COATING SYSTEM that is VERY COST EFFECTIVE - LONG LASTING and USER FRIENDLY!

PLEASE take the time to ASK when you are making your sales calls whether APPLICATIONS are being carried out this year in your accounts.

PLEASE also try to contact ALL your LOCAL APPLICATION companies who are PURCHASING these materials on a REGULAR BASIS!
