

## Example of a Successful Application

### Warehouse Floor Coating

Many industrial companies are looking to protect and enhance their assets. Part of this exercise will include looking after their FLOOR areas.

At THISTLEBOND we supply a UNIQUE FLOOR COATING system, that in most cases can be a ONE COAT application. This has MANY advantages over the competition as it is less expensive to apply as only ONE coat is needed (in most cases).

On porous or BADLY damaged surfaces TWO coats may be needed - purely as a cosmetic exercise.

There is also NO requirement for a PRIMER system to be in place - therefore makes this product - less expensive again!

A UK Distributor has recently applied this product to an end user's warehouse floor.

Front view of two warehouses and production areas needed to be re-coated.

The damaged area is shown above with the existing coating being removed

Here, the floor area is being BLASTED by CLEAN machine to achieve a CLEAN - DRY - ROUGH surface area.

Floor area showing the ABRASION that is achieved by these excellent machines.

Floor is now ready for the single coat THISTLEBOND TPC 620 Polymer Coating System

One part of the building complex is complete.

Second area complete - whole floor coating was carried out over one weekend. Ready for full working on the Monday!!

Notice that there is a "shine" to the surface - HOWEVER this is NOT slippery at all.

This is the "Ultimate" in HARD WEARING - LONG LIFE - LOW MAINTENANCE flooring system.
