TRK2006 - Marine On Board products data sheet

Thistlebond Maintenance and Repair Polymers have been providing on-board maintenance engineers with easy to use and effective products for emergency repairs for many years and are well respected as the number one product in the marine industry.

Thistlebond provide a variety of MARINE REPAIR KITS to suit different on-different requirements. Full technical instruction books and a cdr come with each ON-BOARD KIT.

•The TRK2006 Kit Contains:

TRK19000 Standard Resin – 225 Gram Units X 30

TRK19009 Glass Tape – 100mm X 50m Units X 5

TRK19003 A&B Cement – 1 kilo units X 5

Many industrial and marine companies today are suffering from the long term effects of internal pipe erosion and corrosion due to the amount of time in service and age of plant and equipment.

To prevent the replacement of pipe work – Thistlebond can supply a long term solution that enables full repair whilst allowing full production / plant operation to continue.

By utilising Thistlebond **Resin and Hardener** in conjunction with Thistlebond **Glass Tape** – immediate and cost effective repairs can be carried out.

Surface preparation is at a minimum due to the surface tolerant characteristics of the Resin product.

The end result can offer long term protection at a working temperature of 170°C and at pressures ranging from 35kg/cm<sup>2</sup> (500 psi) through 112kg/cm<sup>2</sup> (1600psi).
